

SUMMARY

Data Scientist with hands-on experience building and deploying machine learning models, analysing large datasets, and translating business challenges into structured analytical solutions. Proficient in Python, SQL, and core ML/NLP techniques, with a strong ability to connect data insights to real-world business impact. Experienced in developing end-to-end ML pipelines — from problem framing and feature engineering to model evaluation and deployment. Passionate about asking the right questions, exploring data to uncover meaningful patterns, and delivering recommendations that drive decision-making.

TECHNICAL SKILLS

Machine Learning & Statistics: Supervised/unsupervised learning, model evaluation, feature engineering, statistical analysis, NLP, sentiment analysis, recommendation systems; scikit-learn, PyTorch, TensorFlow, HuggingFace, RoBERTa
Data Analysis & Business Insights: Exploratory data analysis, trend identification, A/B thinking, translating business problems into ML problem statements, presenting insights to non-technical stakeholders
Languages & Querying: Python (primary), SQL, Java
AI & Generative AI: LLMs, RAG pipelines, Google Gemini API, prompt engineering, hallucination monitoring, agentic workflows
Tools & Deployment: Streamlit, FastAPI, REST APIs, CI/CD pipelines, AWS, Firebase, MongoDB, MySQL, Docker concepts

PROJECTS

- Mood-Based Book Recommendation System

Jan 2025 – Feb 2025

Python, NLP, scikit-learn, PyTorch, RoBERTa, Streamlit, CI/CD

 - Framed a real-world user engagement problem — connecting readers to the right books — as a structured ML task: automated mood detection via RoBERTa sentiment classification feeding into a personalised recommendation engine.
 - Analysed patterns in user emotional input to design a similarity-matching pipeline, translating qualitative user state into quantitative signals for book ranking — demonstrating end-to-end problem decomposition and model building.
 - Deployed to production via CI/CD pipeline with confidence-based validation checks to flag low-quality predictions, analogous to monitoring model drift; iteratively improved model accuracy based on output quality analysis.
- Career AI Agent – Resume & GitHub-Aware Career Roadmap Generator

Nov 2025 – Dec 2025

Python, NLP, LLMs, Generative AI, REST APIs, Streamlit

 - Identified and structured a complex analytical problem — career gap analysis — into discrete, machine-executable stages: data extraction, skill scoring, benchmark comparison, and personalised recommendation generation.
 - Built an NLP pipeline to parse unstructured resume and GitHub data, generating proficiency scores without manual tagging; translated raw, messy data into structured insights that directly informed career recommendations.
 - Monitored LLM output quality iteratively, refining prompts to reduce irrelevant recommendations — applying the same rigour as model evaluation and validation in a standard ML workflow.
- PackVote – Group Travel Decision System

Jan 2026 – Mar 2026

Python, NLP, Cosine Similarity, Generative AI, Google Gemini API, REST APIs

 - Translated a messy, multi-stakeholder business problem (group travel consensus) into a data-driven solution: collected multi-user preference data, applied cosine similarity ranking, and surfaced structured travel recommendations autonomously.
 - Built a heuristic cost-estimation module that filtered and prioritised options based on group budget constraints, demonstrating the ability to combine statistical logic with real-world business rules to drive decisions.
 - Integrated Google Gemini API as the reasoning layer to generate structured itineraries and budget estimates, showcasing experience connecting ML/AI outputs to a tangible, user-facing business outcome.

EDUCATION

Bachelor of Technology in Computer Science and Engineering	2022 – 2026
Lovely Professional University, Punjab	CGPA: 7.4
Intermediate (12th Grade)	2021 – 2022
Narayana Junior College, Tirupati	Percentage: 83%

CERTIFICATIONS

Data Science Methodology IBM	Mar 2026
Big Data 101 IBM	Mar 2026
Data Structures & Algorithms in Python GeeksforGeeks	Feb 2025
Complete Machine Learning & Data Science GeeksforGeeks	Nov 2024
Understanding Cloud Fundamentals LinkedIn Learning	Aug 2024

ACHIEVEMENTS

- Runner-Up, Group Discussion Competition

Apr 2025

Demonstrated ability to clearly present complex analytical findings and data-driven recommendations to mixed technical and non-technical audiences — directly relevant to communicating insights and influencing business decisions.
- Runner-Up, Critical Thinking Challenge

Sep 2023

Applied structured decomposition of ambiguous, multi-variable problems under time pressure — mirroring the analytical process of translating open-ended business questions into well-defined data science problem statements.
